

City of Polson Water System Tech Sheet

Does the City of Polson have adequate water supply?

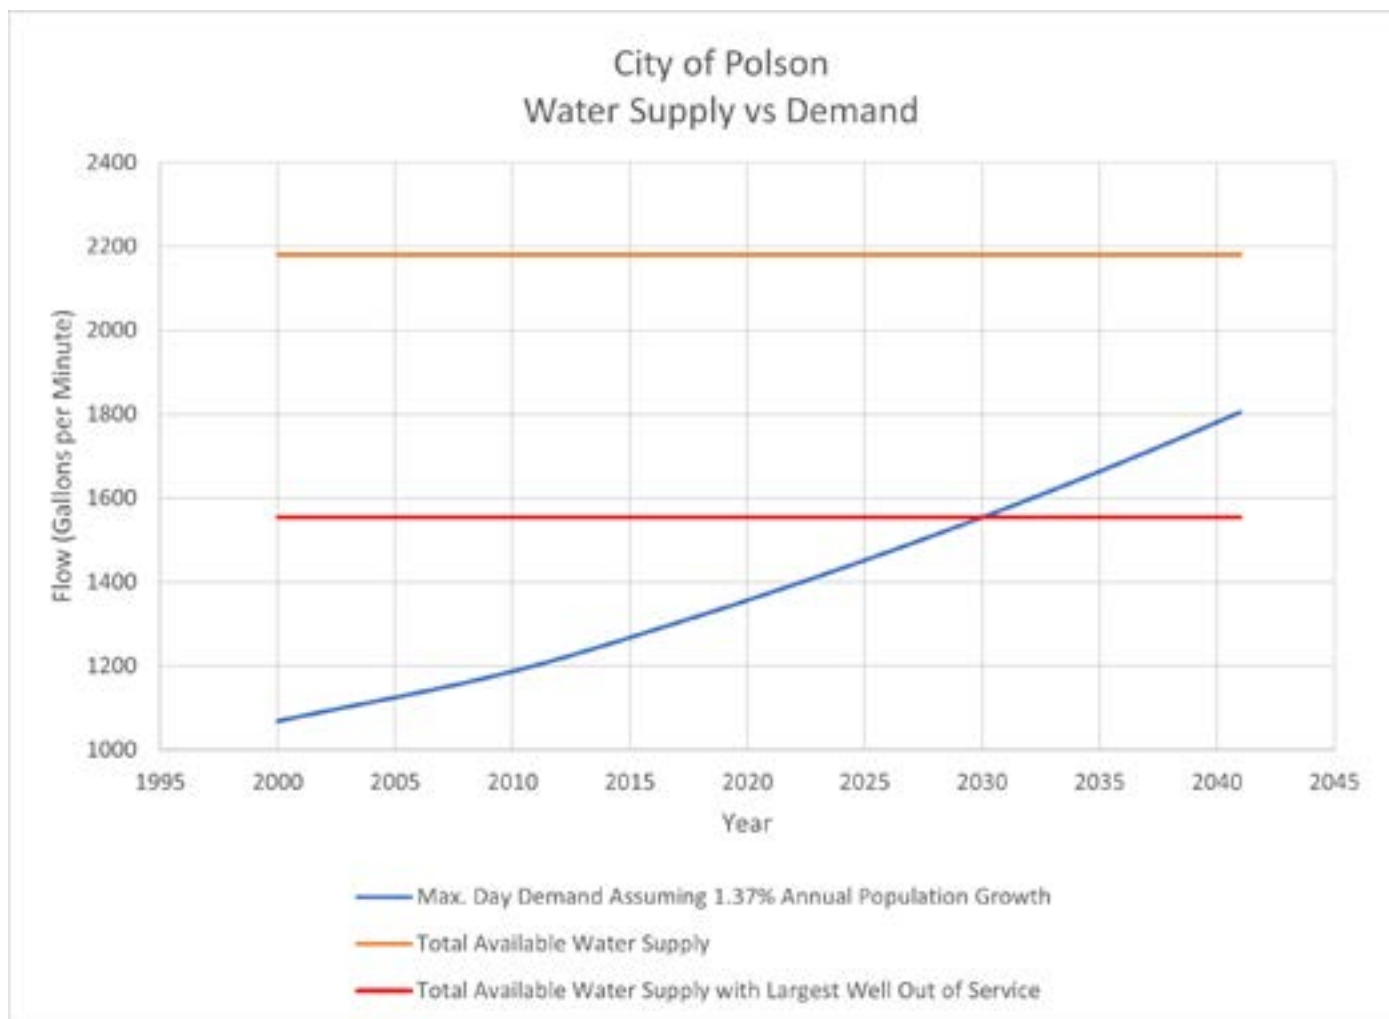

Answer: Yes!

The City of Polson total water supply is capable of producing 2,180 gallons per minute (1,555 gallons per minute with the largest well out of service)

Current maximum daily demand = 1,343 gallons per minute*

* Based on actual water use.

Recent water supply issues were the result of a mechanical issue (faulty pressure reducing valve), not water supply.
